DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-4, drawn to an apparatus (an expendable container comprising a control module capable of vary a discharge characteristic of the piezoelectric element.)

Group II, claim(s) 5-7, drawn to a process (a method of measuring a residual quantity of expendable stored in an expendable container by generating a detection signal.)

Group III, claim(s) 8, drawn to a product (a computer program.)

Group IV, claim(s) 9-11, drawn to a process (a method of manufacturing an expendable container.)

Group V, claim(s) 12-13, drawn to an apparatus (an expendable container comprising a control module capable of setting the discharge characteristic of the piezoelectric element according to the piezoelectric element characteristic information and the discharge characteristic setting information.)

2. The inventions listed as Groups I, II, III, IV and V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The groups listed above are not within the permitted combination of different categories of invention. There are two apparatuses, two processes and one product.

Furthermore, the common technical feature in all groups is an expendable container capable of measuring a residual quantity of ink kept in the ink cartridge utilizes a piezoelectric element. This feature cannot be a special technical feature under PCT Rule 13.1 because the the submitted IDS (Japanese Patent 2001-147146) teaches an expendable container capable of measuring a residual quantity of ink kept in the ink cartridge utilizes a piezoelectric element. Therefore, there is no special technical feature that defines a contribution over the prior art.
